Events and structures for car brands

Our agile and reliable structures can be tailored to work perfectly for your next event

Events live on emotions. In order to create these among the visitors, it is necessary to think outside the box – and to push the technically feasible to the everyday as far as possible.

We are your one-stop shop for all: concept, customization, installation, and dismantling services.

The modular design of the SOLUTION series allows the creation of individual brand spaces on two levels, while the modern facade, branded with the ALEA system, provides the best opportunity to present products and services to the appropriate target group.

All buildings are equipped with the necessary engineering and maintained by the company for the entire term of the lease.

AURUS plant grand launch ceremony

In Yelabuga in May 2021 AURUS plant for serial production of luxury cars was launched. For the opening ceremony with participation of President Putin, head of Tatarstan Rustam Minnikhanov and head of the Ministry of Industry and Trade Denis Manturov RODER installed three pavilions of premium SOLUTION series.

Aurus Senate car presentation hall (15×30), a ceremonial reception hall (15×20), with aluminum/glass wall panels and a VIP pavilion (10×15), for meetings of high-ranking guests.

Warehouses use the RODER H-LINE, a heavy-duty line that provides wind and snow-load. The facility is used as a storage area for PEUGEOT-CITROEN factory and reliability and insulation was a key requirement. Roder specialists have selected the optimal set of engineering systems for industrial structure connected to backbone support systems.

Milestones

Engineered In Germany

MADE BY
RÖDER

“Engineered in Germany” and “Made by RÖDER” are a performance promise to our customers and for us as a premium supplier.

High-quality materials paired with German engineering make our buildings an equally durable but far more cost-effective alternative to a solid structure. In the main we would like to be your competent partner in every step, from the first concept to the organization of all TÜV approvals and fire protection tests right through to dismantling.

Productions facilities are located in four countries (Germany, Turkey, China and Russia). We also produce door sets, facade systems made of aluminum, plastic, glass and ISO-panels, stairs, catwalks, etc. Custom engineered aluminum constructions are also possible.

We are committed to being environmentally friendly and sustainable

The RÖDER Group is certified according to European standards EN ISO 9001:2015 and EN ISO 14001:2015 as well as EMAS, the world's most demanding system for sustainable environmental management. The in-house production control for the execution of steel and aluminium structures is certified according to DIN EN 1090-1.

All of our structures are inspected by TÜV for their design, structural integrity and planning – all statics of RÖDER constructions are calculated and tested according to EN ISO 13782

EMAS

Certified Sustainability

The RÖDER Group is committed to a responsible use of resources across all company areas

The environmental management system's eco-management and audit program certifies environmentally-aware working methods, the use of climate-friendly processes, the sustainable use of resources and the willingness to continually improve environmental performance of the future.

The aim of the EU's EMAS scheme is to help organisations and companies to operate in an environmentally and resource-friendly manner without losing their competitiveness.
